

Spector CNE® Investigator

The Best Selling Employee Investigation Software for Networked PCs

Spector CNE is the simplest, fastest and most thorough way to investigate employee PC and Internet abuse. Spector CNE automatically records emails, chats, instant messages, web sites visited and more... allowing you to investigate employees you suspect of misconduct, prove guilt or innocence with detailed evidence, and prevent misuse of company PCs and the Internet.

Key Benefits

- Investigate and gather evidence of suspicious employee use of company PCs and the Internet
- Eliminate frivolous and wasteful employee activities
- Stop the theft and leakage of sensitive company information
- Reduce company legal liability
- Increase employee productivity
- Ensure adherence to Internet Acceptable Use Policies
- Provide "insider" theft protection
- Meet compliance requirements

Features at a Glance

- Automatically record every detail of employee PC and Internet activity
- Quickly and easily review the activity of any employee
- Watch playback of recorded screen snapshots - the equivalent of a digital surveillance tape
- Multiple levels of security prevent tampering or disabling
- Configure, install and manage over your existing network

Record Everything Your Employees Do on the Internet

Spector CNE Investigator records all instant messages, chat conversations, emails sent and received, web sites visited, programs run, network bandwidth, files downloaded, files copied to removable media, and even keystrokes typed.

In addition, Spector CNE takes screen snapshots to create the equivalent of a digital surveillance tape, so you can see the EXACT sequence of everything your employees are doing, step by step.

This detailed recorded information is automatically archived, organized for easy analysis, and viewable from any network PC... making investigations thorough, fast and simple.

You Have the Right To Know

When your employees abuse their PC and Internet privileges, they are essentially stealing from your company.

To protect your bottom line, you have the RIGHT to know and the RESPONSIBILITY to correct the problems.

With Spector CNE you can:

- Conduct investigations and catch wrongdoers
- Eliminate frivolous and wasteful employee activities
- Stop the theft and leakage of sensitive company information
- Reduce company legal liability
- Enforce compliance with regulations, standards and policies
- Reveal false accusations and act on truth
- End grueling confrontations over racial or sexual harassment

When you absolutely need to know exactly what your employees are doing on the PC and Internet, Spector CNE Investigator is the tool of choice.

"Spector CNE catches everything. Nothing is left to the imagination, and in an investigation, that's critical. With Spector CNE, we've seen non-work activities drop off to almost nothing."

Eric Skillingstad
Director of Information Technology
Mobridge Regional Hospital

Why Monitor Your Employees?

The Top Reasons Companies Monitor Their Employees:

Conduct Investigations and Document Violations

Any employee suspected of engaging in inappropriate, illegal, or unapproved conduct can be investigated with Spector CNE.

Enforce your Acceptable Use Policy

Employees often believe that rules can be bent if no one is watching. Spector CNE ensures adherence to your policy for computer and Internet use. Lower the incidence and risks of sexual and racial harassment and occurrences of online gambling and surfing of pornography.

Compliance Requirements

Meet or exceed Federal, Industry, or Agency compliance requirements with Spector CNE by seamlessly maintaining records of communications and transactions – a requirement for companies in many industries.

Increase Productivity

Significantly reduce the amount of goofing off that has grown common in most workplaces (two hours per day per employee, on average). Spector CNE will cut this huge productivity drain by at least 75%.

“Insider” Theft Protection

One in five employees will copy or print company-owned materials in the days leading up to their resignation. Others will routinely leak sensitive and confidential information, accidentally, intentionally, or otherwise. Spector CNE allows you to look back in time to detect and document this behavior.

Guard Against Corporate Fraud and Criminal Activities

Detect employee fraud and criminal activity taking place within your company. Spector CNE ensures your office computers are not being used for illegal activities and helps you collect the proof you need to prosecute or take disciplinary action.

Conduct Detailed Investigations

Spector CNE empowers you to investigate employees you suspect of productivity, ethics, security, compliance and PC use violations. Spector CNE has a collection of powerful recorders that automatically capture employee computer and Internet activity, day and night, 365 days a year.

Spector CNE will automatically record:

-  Web Sites Visited
-  Online Searches
-  Emails (including webmail)
-  Chats/Instant Messages
-  Keystrokes Typed
-  Program Activity
-  Network Activity
-  File Transfers
-  Documents Saved/Printed
-  Screen Snapshots

Monitor Employees Remotely

Spector CNE recordings are accessible from any computer on your network. Simply select a monitored PC you wish to review and Spector CNE will automatically retrieve the recordings wherever they are stored on your network. The recorded information is organized and displayed on your computer in the Spector CNE Viewer.

Time Saving Top 10 Reports

It is now faster and easier than ever to see what your employees are doing on the PC and Internet. Spector CNE sifts through the recordings from a monitored computer to create Top 10 Reports of the most important PC and Internet activities. See the Top 10 web sites they visit, online searches, people email was sent to, people they emailed and more.

Secure Data Storage

Spector CNE recordings are protected against unauthorized access through

powerful encryption and password protection. Recordings can remain on the monitored PC or be automatically transferred to a network server.

The Spector CNE Data Vault securely stores and organizes recordings that have been transferred from the monitored PCs to the network server.

Simple Backup

The Spector CNE Data Vault makes backup simple by compiling all of your recordings into a single folder that is organized into subfolders for each computer being monitored. Backups made to Tape, CD, DVD or other storage media remain protected through encryption and a security password. Backup recordings can be easily opened and viewed with the Spector CNE Viewer.

Works Over Your Network

The Spector CNE Control Center ensures that you never have to physically visit individual PCs by making network-based installation and management a breeze. Deployment, configuration and review of PC recordings can be accomplished from anywhere on the network... no special training required.

Tamper Proof

Stealth technology ensures that Spector CNE cannot be detected or tampered with by unauthorized users. Once installed, Spector CNE will not appear in the System Tray, Task Manager or in the Add/Remove Programs menu.

“Spector CNE takes care of the surfing and the Social Networking. When it comes to Spector CNE, I’m a believer. Every small business needs to have it.”

Celeste O’Keefe
CEO
The DANCEL Group

The Spector CNE Viewer

The Viewer is the focal point of Spector CNE and provides you with an easy-to-use, tab-based interface for reviewing employee PC and Internet activity.

Recordings are retrieved from your secure archive source (either the monitored PC or the Data Vault), loaded into the Viewer and organized by activity type (Screen Snapshots, Email, Chats/IM, etc...).

The Spector CNE Viewer displays:

- Video-style Screen Snapshot Recordings
- Chats and Instant Messages
- Words and Phrases Searched
- Web Sites Visited
- Emails Sent and Received
- Files Transferred
- Keystrokes Typed
- Programs Used
- Documents Copied and Printed
- User Activity Summary
- Top 10 Activities

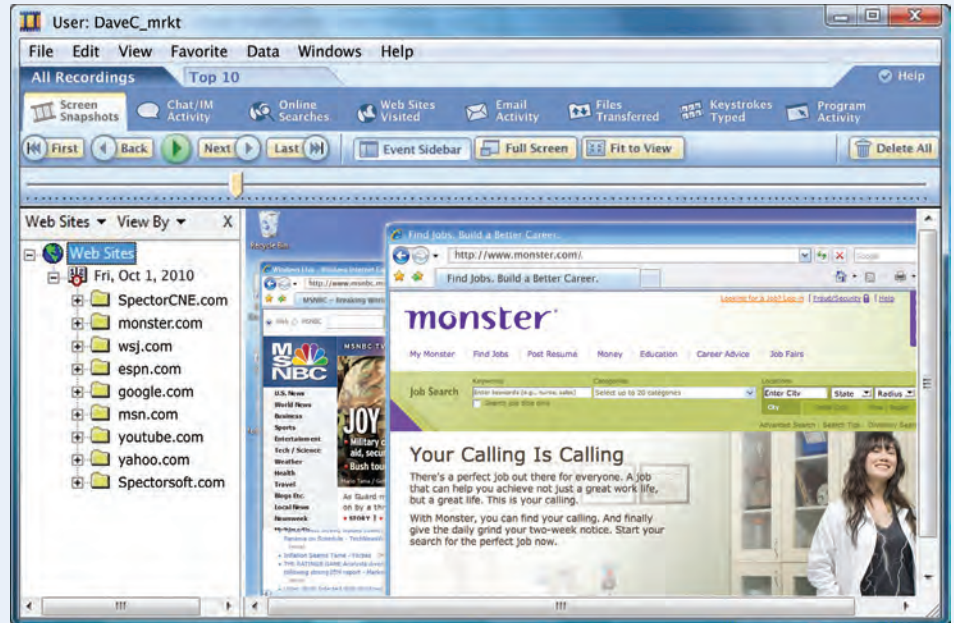

Figure 1. Reviewing screen snapshots is simple with Spector CNE's video-style controls. Press the PLAY button and snapshots replay like a video recording. Move forward one snapshot at a time to carefully examine employee activity, step-by-step. You can also skip ahead; instantly rewind; or jump to a specific date, time or web site visit. Individual snapshots can be printed or a range of snapshots can be exported as a stand-alone video file.

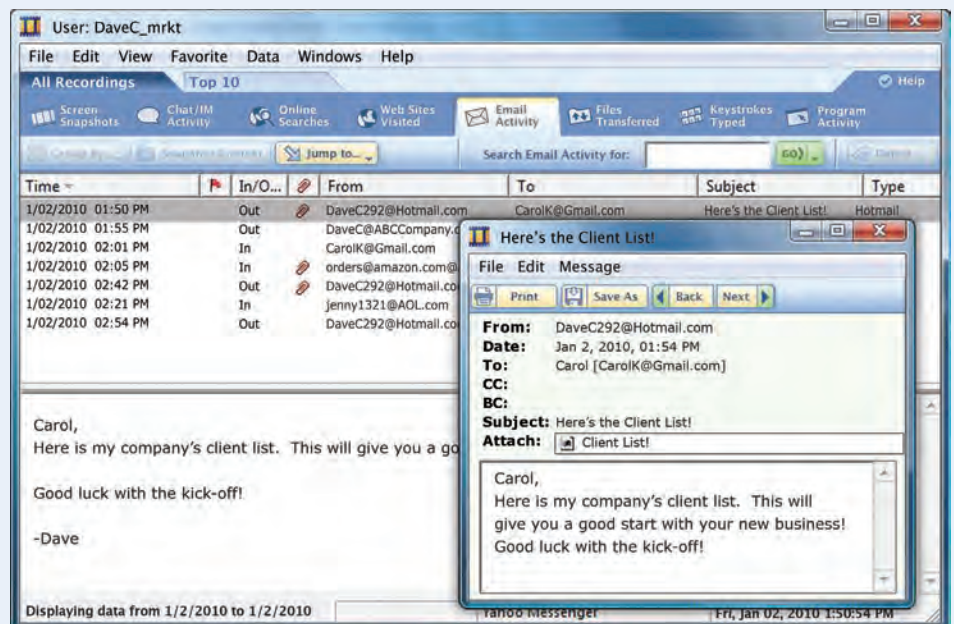

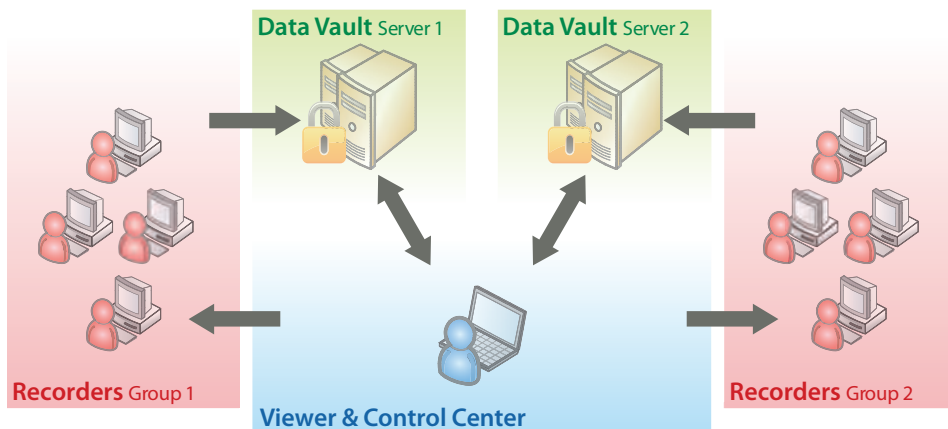

Figure 2. Click the Email Activity tab and you will see a one line summary of all sent and received emails. Click any item in the summary list and Spector CNE will display the entire email message. In addition to corporate email messages in Outlook, Spector CNE records webmail from Google mail, Yahoo mail, Hotmail, AOL and more.

Data Sheet | Spector CNE Investigator

Spector CNE Components

Recorders

The Recorders are installed onto each computer being monitored. Once installed, recording is automatic and undetectable.

Data Vault

The Data Vault is a secure, centralized storage location for your recordings. Each monitored PC will automatically transfer its recordings to the Data Vault for safe keeping until you are ready to review them. You can employ one or multiple Data Vaults (each on a separate server) to organize recordings by department, office floor or building or any category you choose.

Control Center

The Control Center is a management tool used for network installation, configuration and retrieval of Spector CNE recordings.

Viewer

The Viewer is a Windows application that displays recordings from the Data Vault and organizes them into category-based tabs. For instance, click the Email tab and the Viewer will display all Emails sent and received. You can even replay screen snapshots of an employee's PC and Internet activity with the Screen Snapshot Viewer and its easy-to-use, video-style controls.

System Requirements

Recorder (for computers being monitored)

- Windows® 7, Windows Vista®, Windows XP Professional, Windows Server® 2008 or 2003
- Network Access (Networked on a Windows Domain, Workgroup, or Novell Network)
- Administrator share level access (C\$) to computer for remote installation
- Task Scheduler enabled for remote installation
- Registry Services enabled for remote management

Control Center

- Windows 7, Windows Vista, Windows XP Professional, Windows Server 2008 or 2003
- Administrator Privileges to each network computer being recorded
- Network access to computers being recorded

Data Vault

- Windows 7, Windows Vista, Windows XP Professional, Windows Server 2008 or 2003
- Network access to the computers being recorded
- Approx. 2-15 MB of hard disk space per day for each computer being recorded (hard disk requirements may vary depending upon the type of events being recorded)

Primary Server

- Windows 7, Windows Vista, Windows XP Professional, Windows Server 2008 or 2003
- Network access to the computers being recorded

"Spector CNE catches everything... and in an investigation, that's critical. I came up with a per employee savings projection of \$3640 a year."

Eric Skillingstad
Director of IT
Moberidge Regional Hospital

"Since the installation of Spector CNE on a number of our computers in the office, Internet abuse and inter-company email (gossip) has nearly been eliminated."

Joseph Danenza
Alexander Samuel & Co., Solicitor

"Finding and weeding out a problem employee early, that's one of Spector CNE's great values."

Mike Hewitt
CISSP
Sacramento Municipal Utility District

"We could have terminated several people. The problem was so widespread... we distributed pictures anonymously to demonstrate Spector CNE's technology. The game playing stopped cold."

Bob Elliott
Information Systems Manager
